

1 ABSTRACT OF THE DISCLOSURE

2 A construction tool and method of use for affixing holding cap washers to roofing
3 paper and building wrap tar paper. The tool is a combination of a fastener-driving gun
4 together with a feeding magazine holding a clip of plastic cap washers to be affixed, and the
5 feed magazine feeds successive cap washers under the nose of the fastener-driving gun so
6 that fasteners, such as nails or staples, can penetrate the cap washer and hold down the
7 roofing paper or building wrap tar paper. As the cap approaches the nose of the gun, the cap
8 feeder flips the cap ninety degrees along an axis transverse to the feed direction. A shortened
9 shuttle is used with a spring arm holding one edge of the leading cap in the magazine and the
10 rearward portion of the shuttle holding the other edge of the leading cap.
